Experience

Senior Software Engineer – Platform Engineering 10/26 – Present
Alteryx Remote

- Built and operated distributed data-plane services within Alteryx's Platform Engineering organization
- Extended an SRE CLI to support a new cloud infrastructure service, achieving parity with the legacy integration and enabling migration off the legacy service

Senior Software Engineer – GTM Systems 04/22 – 10/26
Alteryx Remote

- Partnered with GTM, product, design, and engineering stakeholders to deliver customer-facing applications using React, TypeScript, and Python, including products that generated $1.8M and $1.4M ARR
- Led engineering initiatives including feature flags, A/B experiments, gradual feature rollouts, user- and account-level overrides, CI/CD pipelines, and automated testing standards
- Designed and implemented rate limiting and quota systems for critical services and AI endpoints, improving reliability and protecting expensive resources
- Helped maintain an internal AI platform powering customer-facing chat, email drafting, and instant recommendations using RAG, vector search, tool calling, and specialized agents

Cloud Services Developer (SWE II) 04/21 – 04/22
HP Remote

- Owned a distributed workflow execution platform built with Django, Celery, RabbitMQ, PostgreSQL, Docker, and AWS, supporting validation workflows across HP's printer ecosystem
- Reduced average API latency by 20% through backend optimizations; supported large asynchronous workloads with distributed task processing
- Built a React dashboard that replaced manual Postman and CLI workflows for test engineers

Software Engineering Intern 06/20 – 03/21
Air-Weigh Eugene, OR

Software Engineering Intern 06/19 – 09/19
TDS Telecom Bend, OR

Portfolio & Open-Source Projects

validate-env-vars npmjs.com/package/validate-env-vars

- Built an environment validation package used across 12+ Alteryx projects, peaking at 40K monthly downloads

IMDb Autocomplete Engine github.com/noahtigner/go-autocomplete

- Built an in-memory search engine in Go over 12.7M IMDb titles, using bitmap and n-gram inverted indexes for multi-term substring search
- Designed concurrent streaming index construction, candidate verification, and bounded top-K ranking, indexing the full dataset in 49s with 3.84 GiB peak memory

Technical Skills

Languages: Go, Python, TypeScript/JavaScript, SQL
Frameworks & Data: Django, FastAPI, React, PostgreSQL, Celery, RabbitMQ
Cloud & Infrastructure: AWS, GCP, Docker, Nginx

Education

University of Oregon | **Bachelor of Science** with Honors 2021
Majors: ***Computer Science*** *&* ***Spatial Data Science***
